TECHNOLOGY PORTFOLIO

Lindsey Sands

Hands-on builder / Lifelong learner

Computer Information Systems student

A LITTLE ABOUT ME

I'm a Computer Information Systems student and technology enthusiast who enjoys exploring how things work, building practical solutions, and learning through hands-on experimentation. My interests include self-hosted infrastructure, Linux, Docker, generative AI, custom PC builds, gaming, and digital creativity. I enjoy moving beyond theory to configure, test, troubleshoot, and improve technology in real-world projects.

Self-hosting | Linux | Docker | Generative AI | Custom PC builds | Gaming | Digital creativity

FEATURED PROJECTS

01 **Ubuntu Linux Music Server**
Self-hosted Navidrome in Docker, published to a custom domain through a Cloudflare Tunnel.

02 **Plex Media Server**
Self-hosted Plex on an HP EliteDesk I upgraded myself, streaming my media library to my devices.

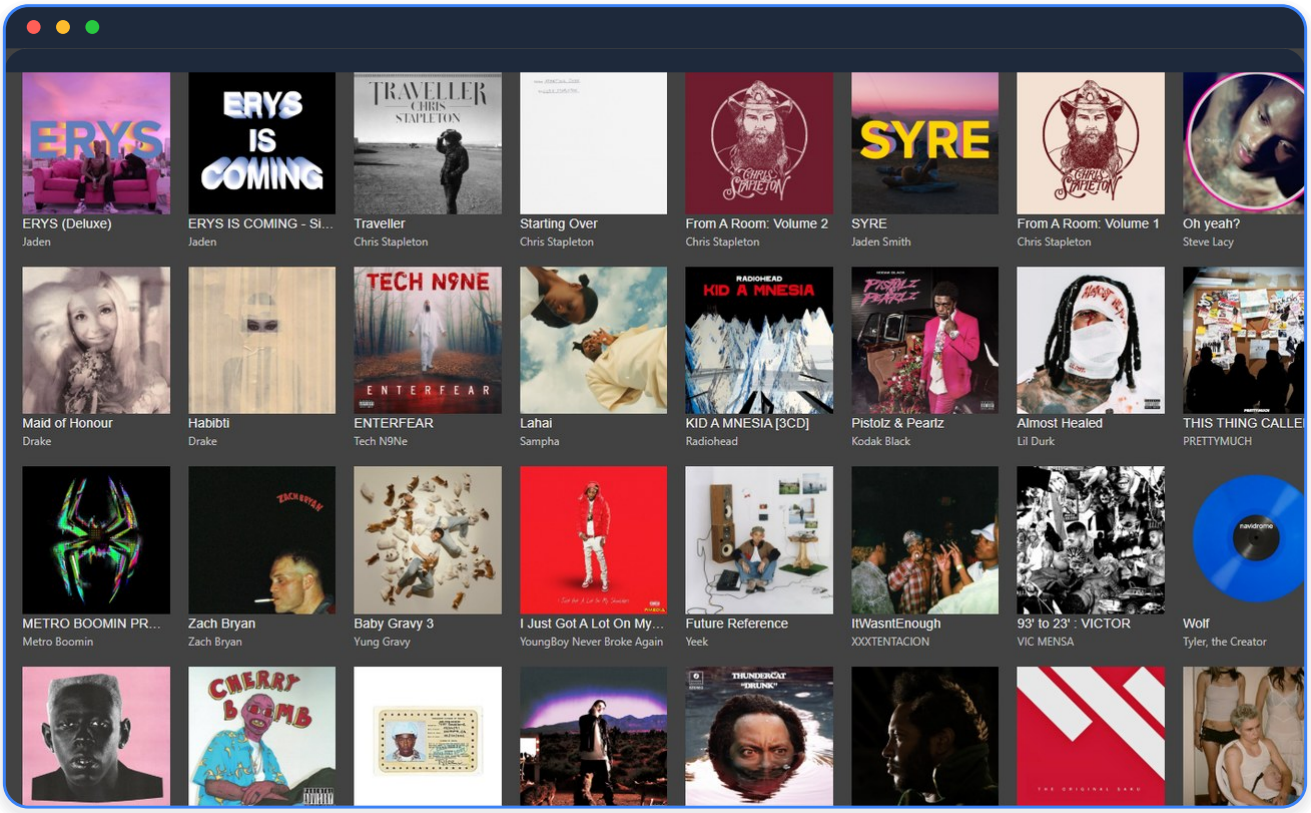

03 **Custom PC Builds & Optimization**
High-efficiency builds that balance performance with available resources and usage needs.

Companion to my resume

01 Ubuntu Linux Music Server

Navidrome / Docker / Cloudflare Tunnel / Self-hosting

Navidrome library view, served from my own mini PC

Configured an Ubuntu Linux server using Docker and a custom domain to host and stream my personal music library, running around the clock on a repurposed mini PC. I use it from a browser and from my iPhone wherever I am.

- Docker Compose deployment with a persistent data volume and a read-only music mount
- Cloudflare Tunnel plus a custom domain: HTTPS without opening any router ports
- Streams to the web UI and to the Substreamer iPhone app through the Subsonic API

HOW IT FITS TOGETHER

Ubuntu mini PC
Docker + Navidrome

→

Cloudflare Tunnel
HTTPS + custom domain

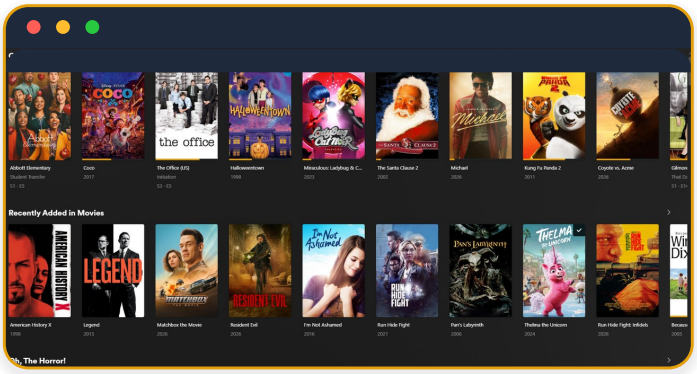

→

Browser + iPhone
Substreamer app

Ubuntu Linux | Docker | Navidrome | Cloudflare | Self-hosting | Domain configuration

02 Plex Media Server

Plex / Windows / Home server / Streaming

Built and maintain a self-hosted Plex Media Server on an HP EliteDesk I upgraded myself, centralizing my movies and shows for streaming across supported devices.

- Installed natively on Windows
- Media library lives on an external HDD

PROCESSOR	MEMORY	BOOT DRIVE	MODEL
Intel Core i5-6600T	**24 GB (from 8 GB)**	**SSD (from HDD)**	**HP EliteDesk 800 G2 DM**

03 Custom PC Builds & Optimization

PC hardware / Performance / Gaming

Designed high-efficiency custom PC builds, selecting and configuring hardware to balance performance with available resources and usage needs.

PC hardware | Custom builds | Performance optimization | Gaming

AREAS I'M EXPLORING

- Self-hosting & home labs
- Linux & containers
- Generative AI
- Custom PC hardware
- Gaming & digital media
- Technology experiments

HOW I LIKE TO BUILD

I learn by doing: researching a goal, configuring the pieces, testing the result, working through problems, and documenting what I discover.

1 Research → 2 Configure → 3 Test → 4 Troubleshoot → 5 Document
